

Expand Your EZ-Earth Soil

1

Place Hydration Bag with EZ-Earth soil block inside on a **flat surface** near where you plan to fill and plant CuBe

TIP:

Turn down top of bag about 2 inches to keep it open
Center EZ-Earth soil block in the bottom of the bag

2

Pour **6 gallons** of water on the soil block one gallon at a time

TIP:

Do not pour 6 gallons at one time, filling your jug between pours allows the soil block to soak up water evenly

3

Wait **1 Hour** for EZ-Earth soil block to expand and absorb all the water

TIP:

If you find any dry pieces of soil when you are filling your CuBe place them aside. Place dry pieces into empty bag and add a little water and top off your CuBe
