

Feed Your CuBe

1

Use one fertilizer pack for each CuBe and sprinkle evenly on soil surface

2

Work fertilizer into top 4 inches of soil

TIP:

Add fertilizer while CuBe is still in the box form.

Myko Start 30 feeds up to 3 months.

We recommend Organic fertilizer, but you may supplement with your choice of fertilizer according to manufacturers dosing recommendations.

If starting seeds keep top of soil damp/moist. Once plants have germinated let soil dry out slightly between watering.

The best way to know to water is to lift CuBe.

A heavy CuBe is well watered, a lite CuBe needs water.
